PROFESSIONAL SUMMARY

Software Development Engineer at Trademo with strong DSA fundamentals (400+ algorithmic problems solved). Building scalable backend systems in **Python and Go**, improving throughput by **25%** and improving response times by **33%**. Delivered RESTful services supporting **2M+ users** in production environments.

EXPERIENCE

Software Development Engineer @ Trademo Technologies Inc.

November 2025 – Present

- Implemented **ACL-driven access control** in Trademo's UMS, enabling secure, scalable role and permission management across various Trademo products.
- Designed, built, and optimized the **Tradescreen Service**, a **LC document screening engine** processing **8K+ documents/day** with rule-based and ML-assisted checks to identify compliance risks, improving screening throughput by **2x** and reducing false positives by **20%**.

Software Development Engineer @ Park+

November 2024 – November 2025

- Engineered **3 core backend services** for the **official Park+ app**, supporting 20M+ car owners across India.
- Architected the **Notification Service**, using **Go** and **Kafka**, ensuring high-throughput delivery of app notifications via **MoEngage** with 99.9% reliability and multi-service integration.
- Developed and improved the **Help & Support Service (CST)**, leveraging a **Python-based** rule engine automating support and handling 1000+ daily user queries.
- Architected and maintained scalable **Report Service** in **C++**, utilizing **Kafka**, enabling real-time reporting for multiple services and processing 10K+ records/day.

Python Developer @ Viveja IT Services

June 2023 – August 2024

- Built a scalable bank account monitoring dashboard with **Python/Django** and integrated ML models into production using **Docker** and **Airflow**, improving system performance by 35% and reliability by 27%.

TECHNICAL SKILLS

Skills: Python, Go, C++, SQL, Django, Gin, Pandas, NumPy, Docker, Kubernetes, AWS, MySQL, PostgreSQL, MongoDB, Kafka, REST APIs, Microservices, Git, Linux, Bash, CI/CD, HTML5, CSS3, Postman

PROJECTS

ByteVault: A full-stack file management application | Website | Source Code

React | Django | Docker

- Built a full-stack file management platform with **deduplication**, eliminating redundant storage and improving **storage efficiency** by 43% and **file retrieval time** by 28%.
- Implemented advanced **search and filtering** (filename, type, size, date) using React hooks with **@tanstack/react-query**, and developed scalable **REST APIs** in Django, reducing response times by 20%. Containerized with **Docker + Gunicorn** and deployed on **Render** and **Vercel** for production scalability and reliability.

GreenWave: Smart Traffic Router | Website | Source Code

Python | Django | YoloV7

- Designed a live video streaming web application for **optimizing vehicle routing** at traffic signals at road intersections.
- Designed a scheduling algorithm for the prediction of optimal timing for green signals, thereby reducing average waiting time for vehicle owners by 29% and minimizing carbon footprint by 11%.

EDUCATION

Bachelor of Technology in Computer Science Engineering

The NorthCap University (Formerly ITM University)

August 2019 – June 2023

- Specialization: *Data Science*
- CGPA: 7.85/10.0
- Relevant Coursework: Data Structures, Algorithms, Operating Systems, Database Management Systems (DBMS), Computer Networks, Object-Oriented Programming (OOP), Software Development, Project Management

ACHIEVEMENTS

Received **50% tuition merit scholarship** (INR 5,00,000) during B.Tech for consistent academic excellence (2019–2023).

CBSE Class XII Board Topper: Achieved 93% aggregate; recognized for academic excellence (2018).

CBSE Class X Board Topper: Secured perfect 10 CGPA; awarded for academic distinction (2016).
